بسم الله الرحمن الرحيم

1- When the user clicks save (when he creates new record or click ed
   and save changes) the button should be hidden and loaded proc
   appear as like this.

Because I notice when I click save and if there is latency and I click it
twice the inserted information is duplicated in the database.

his information should be showing, rather than static information.

2- On the login page, when the user enters to the syste

When he clicks here, return him to the login page.

3- TAU table, used to save the employee information, and to g them the username and password, so the information of username and password should be there, and the password should be saved there. Also, the password should be saved there (TAU table) before the process of encryption is done t So, create new view call it AddNewEmpB101, with its contro to let the admin insert the new employee.

4- Also, set a count time to return the user out system when th is no action on the page.
